Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 7-28-06 has been entered.

2. The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 2617.

Response to Arguments

3. Applicant's arguments filed 7-28-06 and 9-12-06 have been fully considered but they are not persuasive.

4. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., control element has no function, display icon which is assigned to the control element only serves as information) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification

Art Unit: 2617

are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Claim Objections

5. Claims 19 and 20 are objected to because of the following informalities: on line 13 of this claim disclose, "said second operating mode". Since applicant amended the claim from mode to state, it seems that this was typographical error. For examination purposes the mentioned limitation will be equated from mode to state. Appropriate correction is required.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 19-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsoi US005633912A.

As to claim 19, Tsoi discloses radio apparatus embodied in a radio telephone, comprising a display device (see fig. 7, item 74, 76); a first control element and a second control element for selecting and/or activating functions of the radio apparatus which are displayed on said display device (column 6, lines 40-43); said first and second control elements being disposed neighboring said display device so that a local association exists between said first and second control elements and displaying of

Art Unit: 2617

functions of the radio apparatus on said display device (column 2, lines 50-53); wherein a first operating state is provided in which an information about a first operating state on said display device is associated with said first control element, and in which a function for activation of a second operating state on said display device is associated with said second control element, wherein a said operating state is associated with said first operating state and wherein an information in said second operating state is converted into a function for activation of said first operating state, which function can be activated by said first control element (see col. 6, lines 62-65; col. 7, lines 1-6 and fig. 7-13).

As to claim 20, Tsoi discloses radio apparatus wherein in said second operating state an information about said second operating state on said second operating state on said display device is associated with said second operating element (see col. 6, lines 62-65; col. 7, lines 1-6 and fig. 7-13).
